Abstract

The project on developing an online supervision system application for the vocational education dual system, focused on Phetchaburi Vocational College, aimed to 1) create the application, 2) evaluate its efficiency, and 3) assess user satisfaction. The efficiency evaluation involved 5 IT experts selected purposively, while user satisfaction was surveyed among 93 students and supervisory teachers sampled randomly using Taro Yamane's formula at a 5% error margin. The results showed that

1) The online supervision application for dual vocational education, based on the case study of Phetchaburi Vocational College, has been developed with three levels of operation: students, supervisors, and system administrators

2) The experts overall opinion on the effectiveness of the online supervision application for dual vocational education, based on the case study of Phetchaburi Vocational College was at a high level ($M = 4.56$, $S.D. = 0.65$)

3) Users overall opinion on the effectiveness of the online supervision application for dual vocational education, based on the case study of Phetchaburi Vocational College, was at a high level ($M = 4.33$, $S.D. = 0.74$)
